

Whether for mining or mineral processing projects, Rudplan's team is capable of putting together environmental reports ranging from screening level assessments to comprehensive Environmental Impact Assessment (EIA) for Government approvals.

Rudplan has developed an expertise in conducting EIAs for industrial type projects. Whenever possible, Rudplan teams up with local environmental expertise for baseline data fieldwork.

Besides the EIAs for greenfield projects, Rudplan conducts EIAs for brownfield projects where a thorough review and analysis of the existing operations is required.

Services:

- Interpretation and advice on local Environmental Impact Assessment processes;
- Site selection analysis;
- Public consultation through group and focus meetings;
- Collection and interpretation of baseline bio-physical data;
- Collection of socio-economical data (secondary type data and surveys);
- Impact assessment and mitigation measures.
